

Twintec Battery

Traction TTB6652ST

Traction is something that is often requested but not always needed so we advise caution and care in selection.

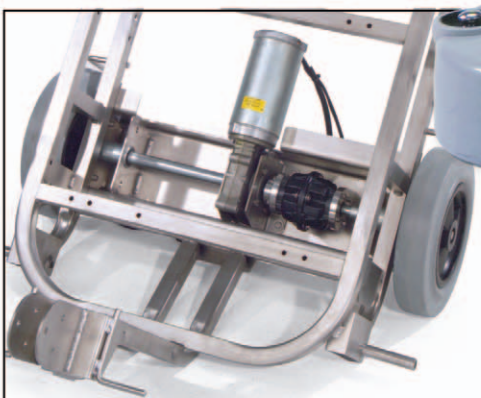

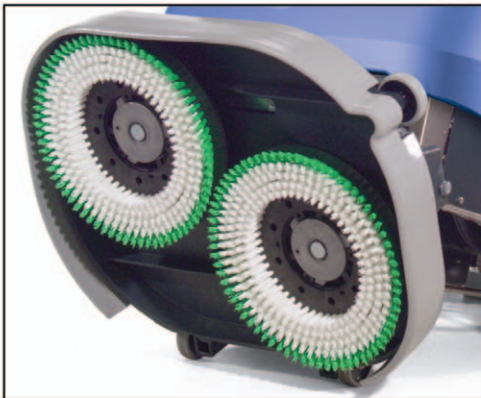

The majority of our machines have "drive" power enough via the brush deck system and are designed to provide maximum ease of use and a high degree of operator control.

Three and a half hours however is a long time and if big, wide open spaces are the cleaning problem to be faced then our variable speed traction assisted machines will prove to be almost the ultimate in cleaning convenience.

In simple terms, variable speeds forward and one in reverse, you simply adjust the speed to suit you and the application and it then does the work while you stay in full control.

Traction drive could be termed as the ultimate Twintec specification but only if it's needed and if the application merits it.

Careful Selection is the Key to Good Results.

| Model | Brush Motor | Vac Motor | Power | Time | Traction Drive | Deck | Brush Speed | Capacity | Weight | Size |
|-----------|-----------------|-------------|---------------------------|---------|----------------|--------------------|-------------|----------|--------|------------------------|
| 665/200ST | 2 x 24V 400W | 24V 400W | 4 x 12V (24V) = 200Ahr | 3.50Hrs | 250W | 650mm 2 x 330mm | 120rpm | 60L | 223Kg | 1230 x 1260 x 970mm |
