

ServoMop SM2416

The Servomop model incorporates all the many advantages of AWS, Automatic Water Separation, but as a side-by-side system with access to both buckets.

This design will appeal to those users who occasionally pre-wash mops in the dirty water pail to remove excessive dirt or contamination when considered necessary.

The SM-2416 is a full two bucket system but you only work from one generous 24-litre bucket, with the second 16-litre pail collecting dirty water automatically. The SM-2416 model includes a useful small caddy for those essential cloths, sprays etc.

Built to a full professional Structofoam specification, Servomop can be used with our full range of Monsoon-Kentucky or Slalom-Flat mops.

SM2416

SM2416W

The SM-2416W incorporates an additional full 30-litre lidded waste system and large, big capacity, top caddy with an additional 5-litre pail.

Servomop ... Mopping systems the way they should be!

Mop Selection

Monsoon Kentucky Mops

Slalom Pocket and Hang-on Mops

Model	Mop Kit	Capacity Clean	Capacity Dirty	Waste Capacity	Caddy	Pail	Castors	Size
