

Spraymop Master

SMM40

There are an increasing number of applications for spot or maintenance mopping, dedicated to keeping a visually good appearance to floor surfaces in high profile environments.

With the world comprising a vast collection of climates and floor surfaces, the Spraymop Master system has been developed to accept the complete range of pocket mops, providing a full choice to suit the majority of needs.

★ A full range of Microfibre and loop designed pocket mops is available to suit varying applications in different environments, see page 21.

Like Spraymop, the Spraymop Master starts with pre-wetting the clean mop before use and simply using the onboard liquid spray system to maintain the level of dampness needed for the specific application.

Spraymop and Spraymop Master are not full large area mopping systems, they are floor maintenance accessories, where localised or spot cleaning is essential in maintaining high standards.
